

Creating experiences that *connect* with people.

I combine research, strategy, and design to uncover what people need and create experiences that truly matter.

PROJECTS

Agent X

01

Student project · Medieinstitutet Stockholm · 2026

How could contextual guidance help new players of Escape from Tarkov, a hardcore survival shooter, without flattening the difficulty its audience plays it for? I ran eight player interviews and synthesised them into two personas and a journey map, then designed four wireframe views and tested them in three think-aloud sessions.¹

¹ My first complete research cycle, run under supervision. The write-up names its own sample problem rather than burying it.

WHAT IT PRODUCED

Participants found and understood the guidance without prompting.

USER RESEARCH SYNTHESIS WIREFRAMES USABILITY TESTING

Scribe

02

Personal project · directing an AI-assisted macOS build · 2026

A Mac app that records a meeting and transcribes it on the machine, with nothing uploaded. I wrote the specification and the acceptance criteria, ran build agents against them, then verified the result by hand. Most of the product decisions were refusals: no cloud transcription, no stored voiceprints, no recording that starts itself from a calendar.

WHAT IT PRODUCED

Four defects survived 283 passing tests, including transcripts that appeared on screen and were never written to disk. Each one needed a person to listen to the output.

SPECIFICATION PRODUCT DECISIONS PRIVACY BY DEFAULT
MANUAL VERIFICATION

Radio

03

Personal project · directing an AI-assisted iOS build · 2026

An internet radio player for iOS, scoped and built in a single working day. One agent built against the scope, a second audited its output, and I tested on a physical phone rather than the simulator. The first run at working this way; Scribe is what the method turned into over thirteen days.

WHAT IT PRODUCED

The audit rejected work that presented as complete, and the phone found a network failure the simulator could not produce.

SCOPING AGENT AUDITING DEVICE TESTING

How I work

Research that survives contact with users

Interviews, synthesis, personas, journey mapping, wireframing and think-aloud testing. One complete cycle so far, run at Medieinstitutet under supervision. What I bring to the second is knowing exactly where the first one was weak.

Comfort with complexity and stakeholders

Thirteen years running a regulated service business taught me to hold a system in my head, translate requirements into something workable, and decide with incomplete information.²

² Swedish public healthcare procurement. Regulated, audited, and slow to forgive an error.

Sceptical use of AI tooling

I use generative and agent-based workflows daily, and I assume their output is wrong until tested. Auditing is the part that matters.

User interviews · personas · journey mapping · wireframing · usability testing · AI-assisted workflows³

³ Figma at a basic level: enough to wireframe and hand over, not a production design skill.

Running my own companies since 2011

STOCKHOLM
2012 – 2025

Founder & CEO · Konduko AB

Founded and led a specialist healthcare staffing company serving Swedish public healthcare. Designed the operating system connecting procurement requirements, physician availability, contracts, schedules, invoicing and quality control.⁴

⁴ Closed the company as a deliberate decision when the regulatory landscape shifted.

& 14001

certified operations

⁵ Procurement estimates, not guaranteed spend and not company revenue. Actual placements depended on regional demand and physician availability.

STOCKHOLM
2011 – PRESENT

Founder · NiyaCare Stockholm AB

A personal assistance company built around matching people with assistants they can rely on. Responsible for understanding individual needs, service quality and daily operations. It is where I learned what autonomy and trust actually require from a service.

BACKGROUND

Before this, thirteen years in visual communication

Athens, 1998 to 2011. Layout and print production first, then project coordination, branding, packaging and campaign work for fashion, food and professional services clients.⁶

⁶ I do not sell this as a current skill. Seventeen years since I worked as a graphic designer, and not what I am asking to be hired for.

It is why I read layouts quickly, and why briefing clients and defending a decision feel ordinary rather than daunting.

Graphic Designer, later Project Manager · Apolyto S.A.	1998 – 2009
Creative Consultant · Angelos Frentzos S.A.	2004 – 2011
Creative Consultant · Barbara's Food Company	2009 – 2010
Design Consultant · PricewaterhouseCoopers	2004 – 2009

EDUCATION

QUALIFICATIONS

UX Design · Medieinstitutet Stockholm	2026
Graphic Design · IIEK Technografiko, Athens	1996
