Portfolio: ioanniskp.github.io/IoannisK_CV/

Founder and Product Management student at Hyper Island, combining 13 years of healthcare service experience in Sweden with user research, scope definition, and practical product development using AI.

## EXPERIENCE

### Founder · Konduko AB

2012 to 2025

Built and led a specialist healthcare staffing company serving Swedish public healthcare. I designed the operating system connecting procurement, physician availability, contracts, schedules, invoicing, and quality control.

25+ public procurement contracts · 140+ physicians on parallel assignments · All regions framework coverage in Sweden

Awarded frameworks had an aggregate estimated value of SEK 1.5B+. This represents procurement estimates, not guaranteed spend or company revenue. Actual placements depended on demand and availability.

### Founder · NiyaCare

2011 to present

A personal assistance company built around matching people with assistants they can rely on. My responsibility spans understanding individual needs, service quality, and daily operations.

## EDUCATION

**Product Management** · Hyper Island · Current

**UX Design** · Medieinstitutet · 2026

**Graphic Design** · IIEK Technografiko, Athens · 1996

## HOW I CONTRIBUTE

User interviews and research synthesis · Scope, priorities, and acceptance criteria · Stakeholder coordination and service operations · Wireframes and prototype communication in Figma · Product builds with AI and manual verification

**Ioannis Koupidis**

## SELECTED PROJECTS

### Scribe

Personal project · macOS · 13 days · Working app

Defined the scope and acceptance criteria for a Mac meeting recorder with local transcription. Compared twelve model options, directed implementation using AI, and verified audio, transcripts, and saved files manually. Found four defects despite 283 passing automated tests.

https://github.com/IoannisKP/scribe

### Agent X

Student project · UX research · 2026 · Researched concept

Conducted eight Discord text interviews, synthesised a research matrix, two working personas, and a journey map, then evaluated four wireframe views in three think aloud sessions. All three understood the guidance; none were target players, leaving the value hypothesis open.

https://ioanniskp.github.io/IoannisK_CV/?lang=en#work/agent-x

### Radio

Personal project · iOS · 8 hours · Working build, not released

Scoped an iOS radio player around browsing, searching, and playback within an eight hour build. Directed separate implementation and review agents, then tested on a physical phone. The audit found four blocking faults; device testing exposed a network failure absent in the simulator.
